SOUMITRA SAMANT

Security Architect II · Cloud & API Security

soumitra.kishor@gmail.com | +91 7666672071 | Goa, India

Core Expertise

API Security & Zero Trust
DDoS & Bot Mitigation
WAF / OWASP Frameworks
Cloud Security Architecture
PCI DSS v4.0 Compliance
Kubernetes & Container Security

PROFESSIONAL SUMMARY

Results-driven Security Architect II with 4+ years at Akamai designing and advising cloud-native security architectures for Fortune 500 and global enterprises. Deep specialization in API security, Zero Trust architecture, and resilience engineering — translating real-world threat intelligence into scalable, compliance-ready defenses. Proven track record protecting organizations against DDoS, bot-driven abuse, and API exploitation while enabling secure cloud adoption and PCI DSS v4.0 readiness.

PROFESSIONAL EXPERIENCE

Security Architect II — Professional Services · Akamai Technologies *Apr 2025 – Present*

- Lead cloud and API security architecture assessments for enterprise clients; deliver prioritized remediation roadmaps aligned with Zero Trust principles, addressing API abuse, authentication gaps, and data exposure risks.
- Architect multi-layered cloud security solutions (L3–L7) combining global firewalls, WAF, micro-segmentation, and edge enforcement — significantly reducing service disruption during active incidents.
- Design incident-driven DDoS and bot mitigation strategies leveraging real-time traffic analysis, adaptive rate controls, and ML-powered behavioral analytics to maintain SLA availability under high-volume attacks.
- Conduct security configuration reviews across Kubernetes, bare-metal, and containerized environments; assess API management platforms including Kong, Apigee, F5, AWS API Gateway, Azure APIM, and MuleSoft.
- Drive Secure SDLC adoption by integrating OWASP-aligned Web and API security controls into CI/CD pipelines, reducing exploitable misconfigurations reaching production environments.
- Lead PCI DSS v4.0 readiness engagements — map architectural controls to compliance requirements, validate evidence, and recommend design improvements balancing regulatory obligations with operational scalability.
- Serve as trusted security advisor to CISOs, cloud teams, and platform engineers; translate complex threat intelligence into actionable security design decisions.

Security Architect — Professional Services · Akamai Technologies *Oct 2023 – Apr 2025*

- Architected, configured, and optimized multi-layered security solutions spanning L3–L7 for diverse enterprise network environments, with particular strength in global firewall infrastructure.
- Implemented advanced DDoS mitigation strategies using pre-emptive detection and real-time response to ensure uninterrupted availability across high-traffic platforms.
- Developed Web Application Security frameworks aligned with OWASP Top 10, securing applications against injection, auth bypass, and data exposure vulnerabilities.
- Established API security governance covering authentication (OAuth 2.0, API keys), authorization, and encryption — protecting sensitive inter-system data flows.
- Deployed malware protection mechanisms leveraging heuristic analysis and threat intelligence feeds to neutralize threats before system impact.
- Executed advanced bot detection and mitigation strategies using ML-based behavioral analytics and fingerprinting to reduce automated abuse and credential stuffing.

Cloud Support Engineer · Akamai Technologies *Oct 2022 – Oct 2023*

- Provided 24×7 Tier-2 support for Akamai's full web and security product suite; resolved site-down incidents involving network delivery, SSL/TLS failures, and origin connectivity.
- Performed deep-dive analysis using TCP traceroutes, Wireshark packet captures, and HTTP/S header inspection to diagnose L3–L7 issues.

- Automated log analysis and troubleshooting workflows with Bash and Python scripting; monitored Security dashboards and escalated high-severity threats.

Technical Solutions Engineer Associate · Akamai Technologies *Aug 2021 – Sep 2022*

- Resolved complex DNS issues including AXFR zone transfers, primary/secondary server configuration, and propagation failures.
- Implemented DNS-level and application-layer load balancing using cookies, headers, path-based routing, and custom variables.
- Collaborated cross-functionally with Security Architects, Engineering, Operations, and Account Management to resolve enterprise post-sales technical challenges.

TECHNICAL SKILLS & CERTIFICATIONS

Security Domains: API Security, Zero Trust, WAF, DDoS Mitigation, Bot Management, SIEM

API Gateways: Kong, Apigee, F5, AWS API Gateway, Azure APIM, MuleSoft

Network Security: Firewalls (L3–L7), TCP/IP, SSL/TLS, DNS, Load Balancing, Micro-segmentation

Cloud & Platforms: AWS, Azure, GCP, Kubernetes, Docker, Containerized Environments

Protocols & Standards: OWASP Top 10, PCI DSS v4.0, NIST CSF, Zero Trust Architecture

Scripting & Tooling: Python, Bash, Wireshark, Packet Analysis, HTTP/S Debugging

EDUCATION & TRAINING

B.E., Computer Science · KLE Technological University, India *2017 – 2021*

- Developed Enterprise Image Retrieval System for Samsung Research Institute – Bangalore.
- Built secure File Sharing Portal for Goa Shipyard Limited (Ministry of Defense).
- Founded CyberKLE, an on-campus IT security community focused on applied security research and knowledge sharing.

Fundamentals of Cyber Security (3-credit course) · Tel Aviv University, Israel *Jul – Aug 2019*

- Immersive coursework in cyber security fundamentals with site visits to Checkpoint Software Technologies and Synamedia Ltd.
